

Project Priority Matrix – Intelligent Assistant

Priority Matrix – Intelligent Assistant

The project focuses on developing an Intelligent Assistant for Windows that can execute smart commands locally without using paid cloud services or external hosting.

Below is the project priority matrix:

Criteria	Constrain	Enhance	Accept
Time	✓		
Performance (Functionality & Accuracy)		✓	
Cost (Resources & Tools)			✓

Explanation:

- Time – Constrain: Delivering the project within the set deadline is essential as it is a graded university project.
- Performance – Enhance: Focus on improving the assistant's intelligence and accuracy in understanding and executing commands.
- Cost – Accept: Since no paid cloud services or external hosting are used, cost is not a strict limitation, allowing flexibility in local resources.
